

## Mechanical Systems Engineer

La Rochelle (Lagord), France

### About Genevos – Decarbonising the maritime sector

**A unique opportunity to play a key role in the innovation of zero emission hydrogen-electric power solutions to replace fossil fuels onboard vessels.**

Genevos is a leading developer of fuel cell electric powertrain technologies for marine applications in to accelerate the shift towards clean energy for the maritime sector. Genevos produces innovative fuel cell power modules that convert green hydrogen and other lower carbon e-fuels into clean power in order to decarbonise ferries, work boats, shipping and pleasure craft.

### Culture

Genevos is driven by a strong team of self-driven individuals who take initiative in their work, are creative and thrive off solving engineering challenges.

If you are passionate about enabling positive environmental change and are looking to play a key role in a fast-growing start-up, then Genevos could offer you the adventure and fulfilment that you are looking for.

### The Role

Genevos is recruiting an experienced Mechanical Systems Engineer to be a core part of the product development team to engineer high power fuel cell systems for clean maritime applications.

Reporting directly to the Technical Manager, the role includes:

- Systems engineering of new fuel cell product developments at Genevos, playing a key part in the concept definition for maximising efficiency, durability and fuel compatibility;
- Mechanical design integration of powertrain systems, using 3D design software, to design specifications and marine industry standards;
- Coordinate and develop relationships with key suppliers, and leading the selection and procurement of key parts and subsystems;
- Participate in the industrialisation process of products through applied design-to-manufacture, through to production drawing;
- Develop strong understanding of maritime design guidelines and be able to manage risk-based design processes including HAZID, HAZOP & FMECA.

### Required Experience / Qualifications

- Minimum of 3 years of professional experience in mechanical design and systems engineering, ideally in the field of powertrain engineering;
- Ideal skills and experience in any of the following spheres of engineering (advantageous):
  - Power systems architecture
  - Fuel cells
  - Mechanical design
  - Fluid mechanics and CFD
  - Marine engineering
- Education: Master's degree in mechanical engineering or equivalent;
- Strong foundation of fluid mechanics and heat transfer with applied engineering experience;
- Demonstrated ability to support projects from conception to completion;
- Proficiency in 3D CAD modelling software (SolidWorks & AutoCAD preferential)
- Comfortable in French language, with basic conversational skills required in English.

### Required Personal Skills

- Self-organised with capacity to prioritise, manage time effectively, multi-task, and adapt;
- Results-oriented and continuous improvement approach;
- Excellent interpersonal skills and a strong sense of ethics.

### Additional Information

- Work Location: Lagord, Charentes-Maritimes, 15 minutes from La Rochelle by bike;
- Contract: Permanent & full time (CDI);
- Start: Immediate.
